Social Media Trends Analysis

Prepared By: Harshit Pandey and Geetha
Mentor: Valli Natarajan

Introduction

- The “Viral Social Media Trends Analysis” project is developed using Microsoft Excel to analyze social media performance data from different platforms. The main purpose of this project is to identify trending content, engagement patterns, regional performance, and audience interaction through data visualization and dashboard analysis.
- In this project, raw social media data was cleaned, organized, and analyzed using various Excel features such as Pivot Tables, Charts, Conditional Formatting, Filters, Data Cleaning, and Dashboard Design. The dashboard provides insights into likes, shares, comments, engagement rates, hashtags, and platform-wise performance.
- This project helps in understanding how social media trends impact audience engagement and how businesses or content creators can improve their online performance by using data-driven decisions.

Objectives

- To analyze viral social media trends using Excel.
- To study audience engagement across different platforms.
- To identify top-performing hashtags and content types.
- To compare regional and monthly engagement trends.
- To create an interactive dashboard for easy data visualization.
- To perform data cleaning and remove inconsistencies from the dataset.

Dataset Overview

Dataset includes:

- Post_Date
- Platform
- Likes
- Shares
- Comments
- Views
- Engagement Rate
- Region

Tools & Technologies

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers
- Conditional Formatting
- Data Cleaning Techniques
- Dashboard Design
- Formulas and Functions

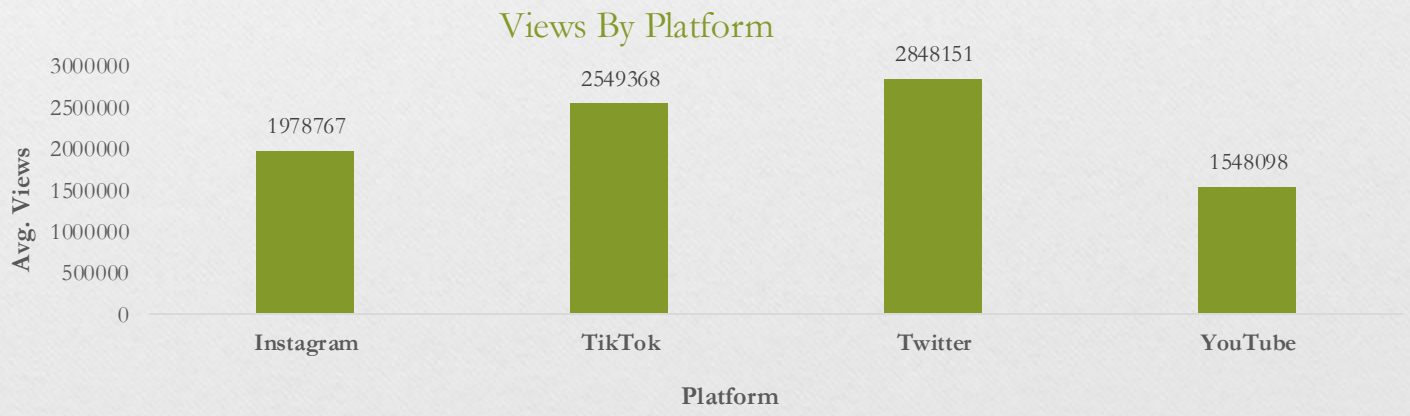

Data Cleaning Process

- Handled missing values, duplicate records, formatting issues, and prepared the dataset for analysis.

Platform Analysis

- Compared social media platforms such as Instagram, YouTube, TikTok, and Twitter.

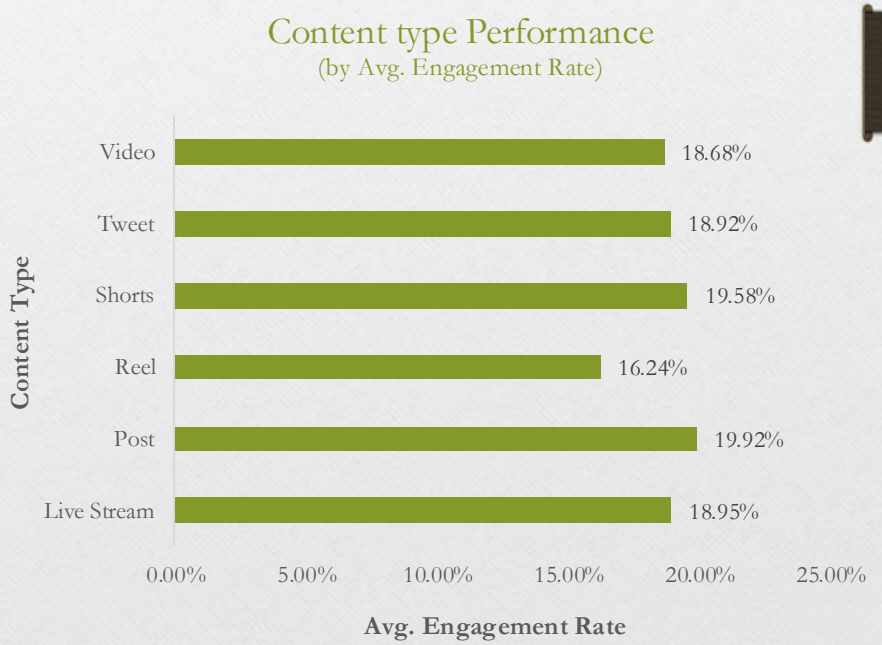

Platform	Average of Views
Instagram	2527459
TikTok	2146542
Twitter	2758539
YouTube	29722
Grand Total	**2479652**

Content Type Analysis

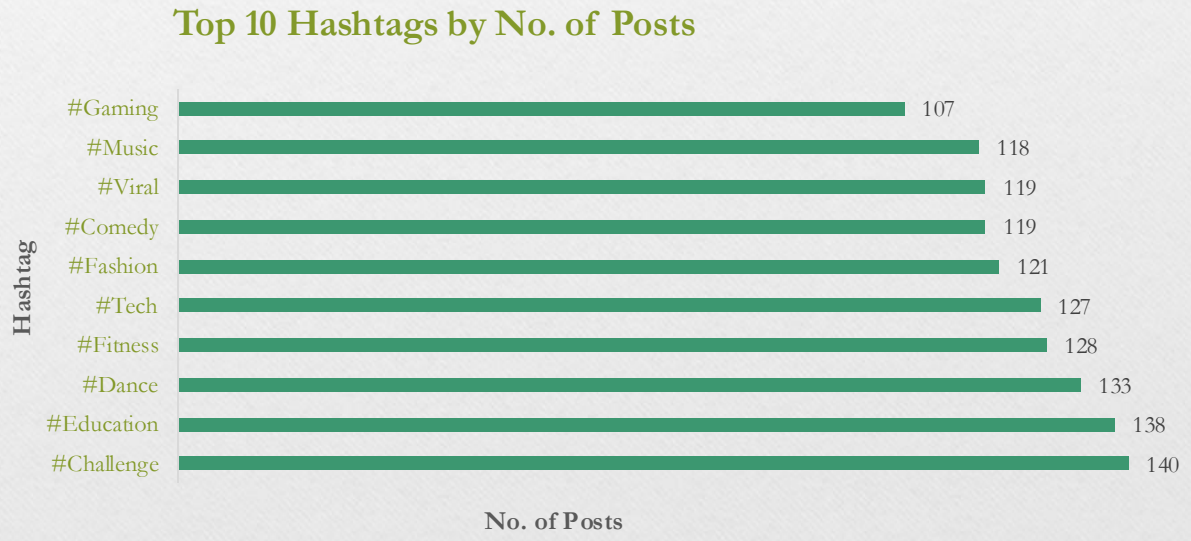

- Analyzed performance of videos, reels, images, and other content formats.

Content Type	Average of Engagement Rate
Live Stream	18.95%
Post	19.92%
Reel	16.24%
Shorts	19.58%
Tweet	18.92%
Video	18.68%
Grand Total	**0.187391682**

Hashtag Trend Analysis

- Identified trending hashtags and their impact on audience engagement.

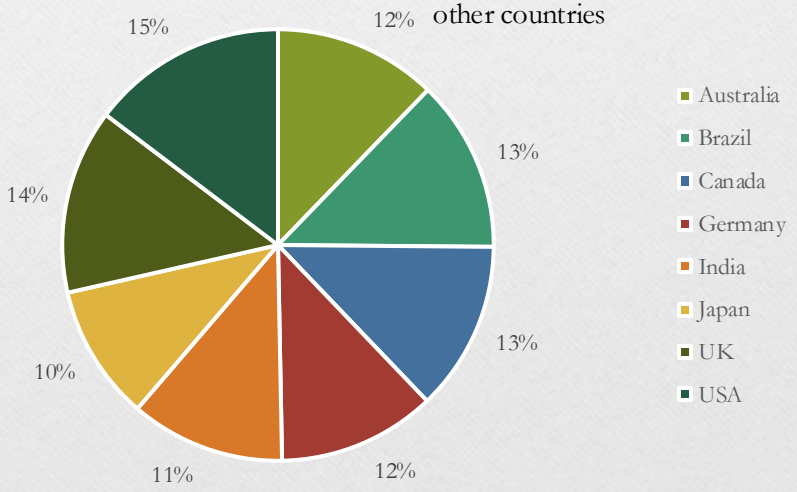

Regional Analysis

- Compared engagement trends across different regions and audience groups.

Region	Sum of Views
Australia	410682697
Brazil	432760531
Canada	426970294
Germany	397394102
India	389117554
Japan	340846408
UK	464936524
USA	493033543
Grand Total	**3355741653**

Total Views by Region

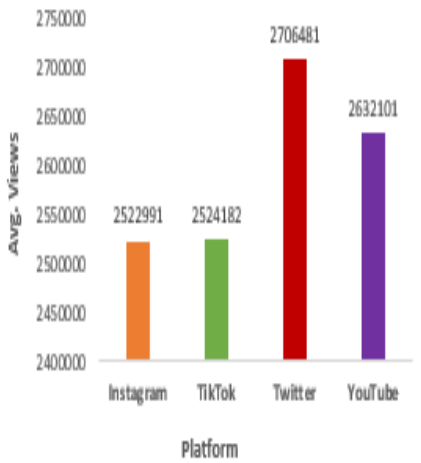

USA has most total Region views when compared to other countries

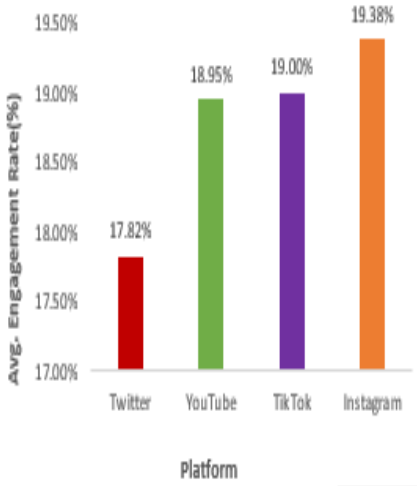

SOCIAL MEDIA TRENDS DASHBOARD

Total Views	Total Likes	Total Shares	Total Comments	Avg. Engagement Rate(%)	Total Posts
12,398.54M	1,145.51M		115.09 M	18.23%	4638

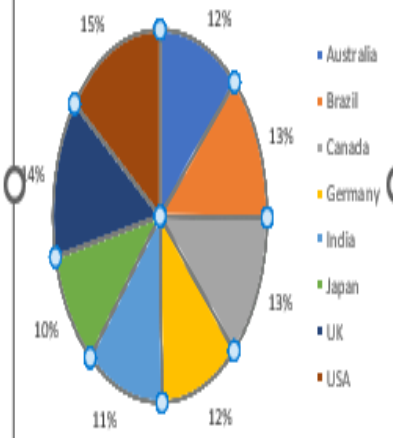

Views By Platform

Engagement Rate(%) by Platfrom

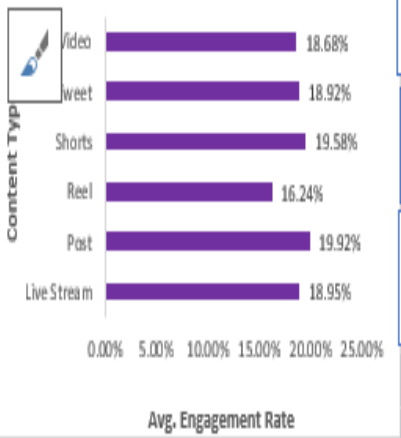

Total Views by Region

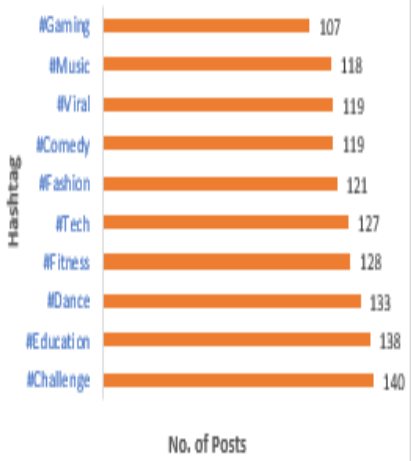

Content type Performance

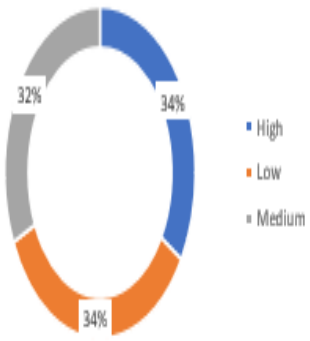

(by Avg. Engagement Rate)

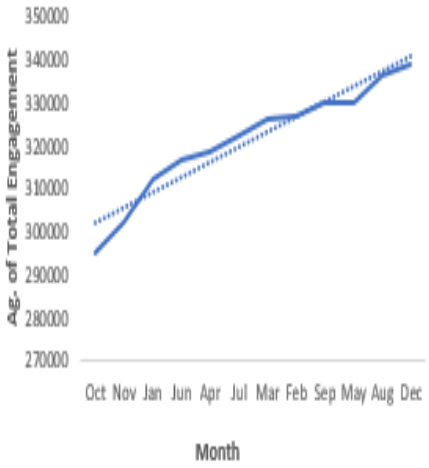

Top 10 Hashtags by No. of Posts

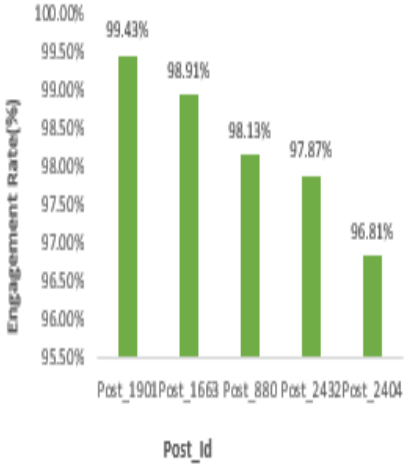

Engagement Level Distribution

Month by Engagement

Top 5 post by Engagement rate(%)

FILTERS

- Platform: Instagram
- Region: Australia
- Content_Type: Live Stream
- Engagement_L...: High

INSIGHTS

Twitter generated the highest avg. views , indicating strong audience reach.

.Youtube & TikTok shows the highest avg. engagement rates among platforms.

.Post & Shorts performs best with nearly 19% avg. engagement rate,making it the top-performing content-type.

.Top hashtags driving max. posts are : #Challenge , #Education,etc.

.Monthly engagement trend shows a gradual increase over time , indicating improving

NOTE: Engagement Rate = (Likes + Shares + Comments) / views * 100

Key Findings

•The analysis showed that **Twitter had the highest average engagement rate** among all social media platforms.
•**TikTok and Twitter generated higher average views** compared to other platforms, showing stronger audience reach.
•**Video and Shorts content performed better** in terms of total engagement than other content types.
•Trending hashtags such as **#Challenge and #Education** received high audience interaction and views.
•Certain regions showed significantly higher likes and engagement, indicating that audience behavior changes by location.
•Monthly analysis revealed that engagement levels were not constant throughout the year and varied from month to month.

Project Outcomes

- Easy comparison of engagement metrics across regions and months.
- Better understanding of social media engagement trends.
- Identification of high-performing hashtags and platforms.
- Improved analytical and dashboard creation skills in Excel.
- Enhanced ability to clean and visualize real-world datasets.

Questionnaire

General Questions

- What is the main aim of this project?
- Why is social media trend analysis important?
- Which dataset was used in this project?
- What are the key performance indicators analyzed?
- What is the importance of dashboards in data analysis?

Excel Related Questions

- Which Excel tools were used in this project?
- What is a Pivot Table and why is it used?
- How did you clean the dataset?
- What is conditional formatting?
- What is the purpose of slicers in dashboards?
- Which formulas or functions were used?
- How did you calculate engagement rate?

Conclusion

The Viral Social Media Trends Analysis project demonstrates how Microsoft Excel can be used effectively for data analysis and dashboard creation. The project provides valuable insights into audience engagement, trending hashtags, and platform performance. It also improves analytical thinking and practical Excel skills, making it useful for academic learning as well as real-world business applications.
